The Four Wheel Pop-Up Camper Shell Model is available in all of our current model sizes (except flat bed models). We have sizes to fit most all trucks on the market today. The Grandby Shell, which fits full size, long bed trucks, weighs in around 975 lbs. The Shell Model for mini / mid-sized trucks is around 875 lbs. All of our shell models have the same construction that allows the camper to flex with the torque generated by the bed of the truck while still maintaining its structural integrity.

A variety of options are available to assist our customers in creating a camper that best suits their particular needs. Additional options are also available for the shell models (due to the open interior) such as a driver's side louvered window or a couch/bed installed on the passenger's side.

For prices and a full description of what can, and cannot be accommodated on the shell models please, please see our option list below. Given our 45+ years of experience in manufacturing the Four Wheel Pop-Up Campers, we can help you identify and understand the specific limits involved, and the most effective and cost saving way to accommodate your needs.
